

To All McKeon Field Users,

Please follow the steps below to help take care of the field. This will make sure the field is ready for the next game/user. It also keeps the infield skimmed area from forming puddles during rain storms. Thanks.

1. The entire infield needs to be dragged.
2. The baselines need to be raked. Please do not go side to side, but up and down to eliminate lips forming.
3. The infield edges need to be broomed to eliminate lips forming.
4. The area in front of the bases that a drag can't reach need to be raked.
5. The mound and plate need to have holes filled with clay and then tamped and watered (very light water).
6. The plate and mound need to be covered before you leave.

This takes us about 10 minutes after the game.

* Groups need to use their own equipment/materials to maintain field.
